HÄFELE

Maximising
the value of space.
Together.

THE INVISIBLE REVOLUTION.

HÄFELE FREE SLIM – FLAP FITTINGS.

MAXIMUM FLEXIBILITY.

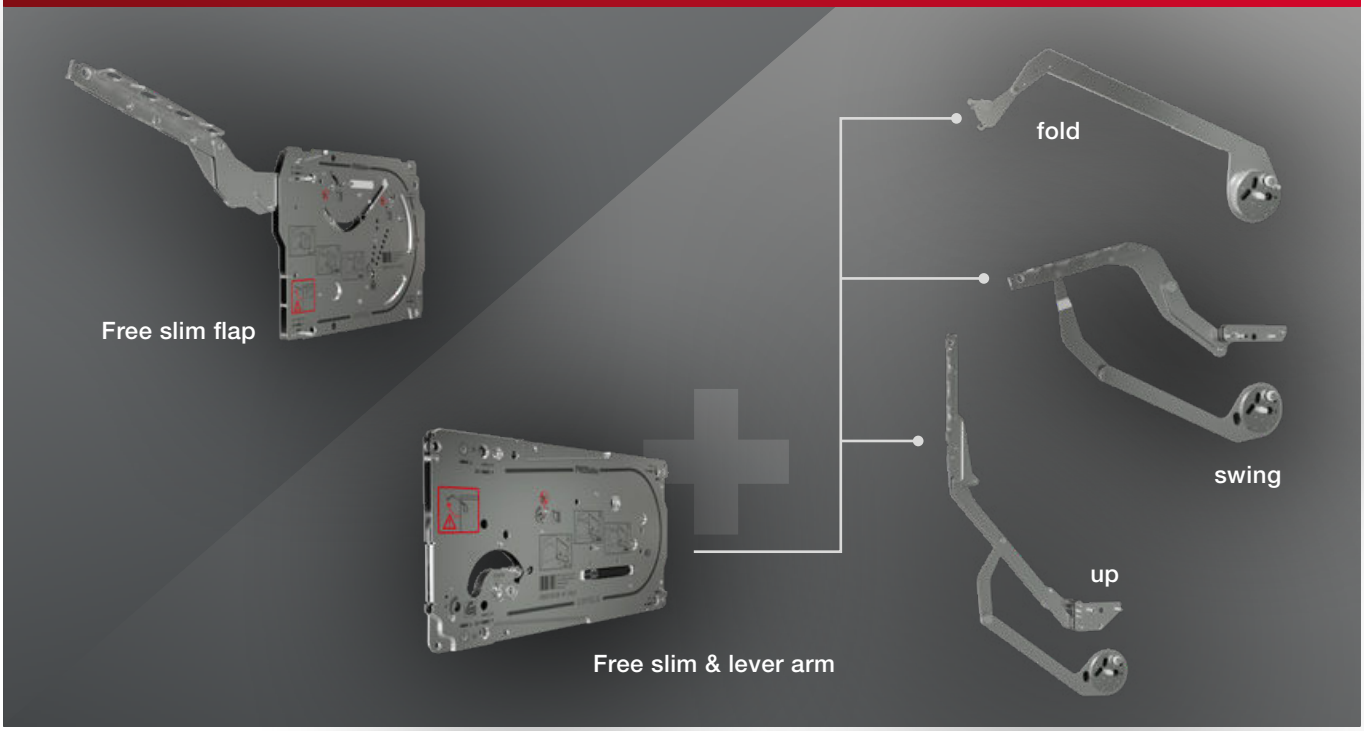

Häfele Free slim is an innovative family of flap fittings whose extremely slim product design allows for unprecedented creative freedom in furniture design. The heart of this family of fittings is a completely new technology that ensures maximum flexibility in processing: the fittings can be used both on the right and on the left. At the same time, the fabricator has a choice of three different installation options: classic screw assembly or integration into the side panel from the inside or outside. Thanks to interchangeable lever arms, a lift mechanism unit can also be easily converted into a high-folding, front-lift or lift-up flap fitting.
More flexibility is really not possible.

MAXIMUM EFFICIENCY.

Thanks to the innovative functional principle, Häfele Free slim covers all flap applications and types of openings with very few types of fittings. The identical lift mechanism units for high-folding, front-lift and lift-up flap fittings as well as the right-left capability of all fitting models also help to reduce the number of fitting types by about 90% compared to conventional flap fitting families. This noticeably simplifies logistics along the entire value chain, starting with product selection through to warehousing as well as allocation and control processes in production, and also reduces possible sources of error. This increases efficiency and sustainability.

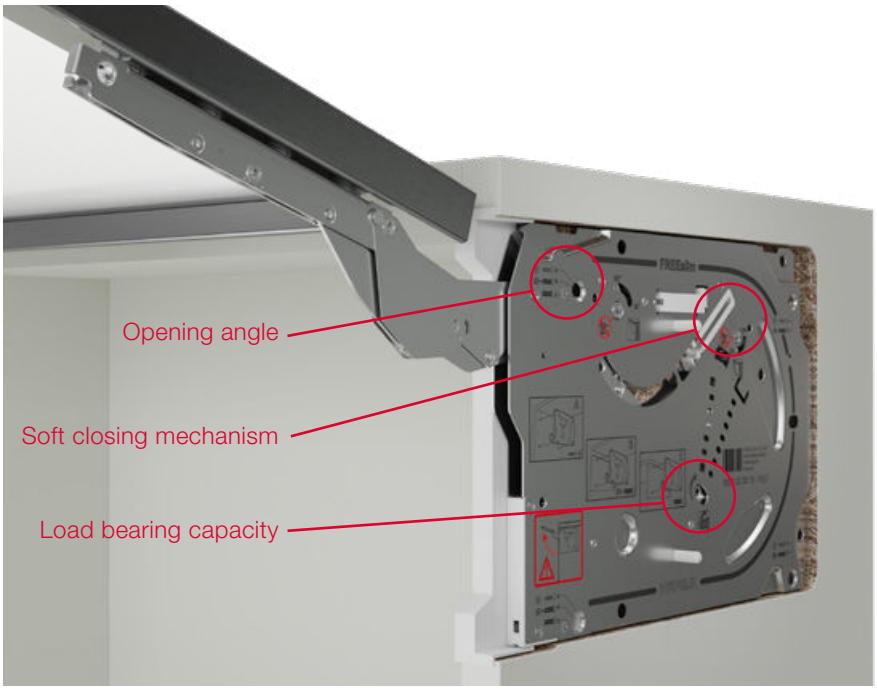

TWO POWER CENTRES FOR ALL TYPES OF OPENING.

MAXIMUM CONVENIENCE.

Häfele Free slim also features all the tried-and-tested properties of the Free product family. Basic functions such as precise adjustment of the load bearing capacity to the multi-stop function and integrated soft closing mechanism are just as much a matter of course as maximum reliability and the highest quality standards in the Häfele production plant. The low opening resistance and excellent running properties ensure easy operation. The clear, coloured printing allows the fitting to be installed and adjusted intuitively. Free slim also offers a solution for modern, handle-free cabinet design with the purely mechanical push-to-open function or electric opening aids. Customer satisfaction and user convenience are guaranteed.

MAXIMUM MINIMALISM.

Slim, slimmer, Häfele Free slim. The slender width of just eight millimetres allows the user to make maximum use of the interior space of the cabinet. For the furniture manufacturer, this results in a high degree of freedom in processing that was previously not possible. The fittings can be screwed on conventionally or integrated “invisibly” into the side panel from the inside or the outside. The side panel processing required for integration of fittings can be easily incorporated into existing production processes using a standard milling device. The up-and-swing lift mechanism unit shared by the Free slim fold can also be installed vertically in cabinets with a shallow depth.

HÄFELE

FREE SLIM SETS NEW STANDARDS.

ADVANTAGES FOR THE FURNITURE MANUFACTURER.

Revolutionary design.
For the first time, a pure and uniform wall unit design is possible for all familiar types of opening.

Highest quality standards.
Free slim is developed and produced by Häfele. This means high quality and security of supply is guaranteed.

High level of standardisation.
Free slim covers all conventional flap heights and weights with very few fitting types.

Easier processing.
Complexity, stock requirements and potential errors are reduced with the help of the very few fitting variants of the Free slim family.
